

Controlled Access. Audit Capability. Physical Security. System Management.

NEXGEN[®] Batch Key Programmer

The Batch Programmer simplifies key room operation by automatically programming and charging electronic keys. When used with NEXGEN software, you can schedule processing to take place overnight or whenever network traffic is lowest. Keys will always be ready to issue when collectors arrive.

The system can be connected directly to a PC or LAN connection, so it is flexible enough to fit into your current office layout. You can program and charge up to 255 keys on a single system. Medeco will design a custom solution based on the number of keys you need to program and the location of the batch programming rack.

Benefits:

- ◆ Keys can be charged and programmed automatically so they will be ready for each day's collections
- ◆ Docking Station Rack can be located on your LAN to put keys within easy reach of collectors or key room personnel
- ◆ Additional Docking Stations can be added as your operation expands

Applications:

NEXGEN installations that require a high volume of keys to be processed at the same time.

Ordering Information

EN-50000	Docking Station
EA-350070	Power Supply Required when using rechargeable keys
EN-50010	Docking Station Rack Mounts eight Docking Stations
NOTE:	Medeco will specify the cabling and source of COM ports needed for each application

Technical Information:

- ◆ Requires NEXGEN Security Manager or VendSecure® software
- ◆ A single rack holds up to eight Docking Stations
- ◆ One COM port is required for each Docking Station
- ◆ Software supports up to 255 COM Ports
- ◆ One power supply required per Docking Station if rechargeable keys are used
- ◆ Medeco will design a solution to provide port access based on your operational needs

Finishes:

- ◆ Docking Stations: Black ABS plastic
- ◆ Mounting Rack: Extruded aluminum

Warranty:

- ◆ 1 year manufacturer's warranty
