

Controlled Access. Audit Capability. Physical Security. System Management.

NEXGEN[®] Collector Key

When a mechanical key is lost, stolen, or copied your locks cannot protect you. However, the NEXGEN Collector Key is virtually impossible to duplicate. And if it is ever lost or stolen, it will not work outside of its activation schedule or beyond its expiration date. In an emergency, you can even block a lost or stolen key from your system, allowing you to respond immediately to security concerns.

Collector Keys are at the heart of any NEXGEN system. Not only do they provide power to the locks, but they also carry all programming changes. You will never have to travel to a lock to change access privileges or schedules.

The NEXGEN key is designed for the most demanding industrial environments. Every key includes rugged features such as a solid aluminum body, o-rings to prevent water intrusion, and a hardened steel key tip. Collector Keys can be ordered with your choice of a replaceable or rechargeable battery. Rechargeable keys are recommended for extremely high use applications such as parking meter collections.

Benefits:

- ◆ Stores access codes for up to 11,000 locks
- ◆ Can be programmed for a daily activation schedule with start and stop times
- ◆ Records up to 6,000 time and date stamped events
- ◆ Will not operate past its expiration date - reduces liability from lost or stolen keys
- ◆ Replaceable, hardened steel key tip
- ◆ Tough, weather resistant design

Applications:

Can be used with any NEXGEN lock when the ability to control and track access is a vital component of your security.

Ordering Information

Keys

EV-5502	NEXGEN Collector Key
EV-5502R	NEXGEN Collector Key, Rechargeable Battery

Accessories

EV-500004	Docking Station with Cable (RJ-45 to DB-9 programming cable included)
