

Controlled Access. Audit Capability. Physical Security. System Management.

# VendSecure® Software

Medeco developed VendSecure with the input of vending industry professionals to complement daily route operations.

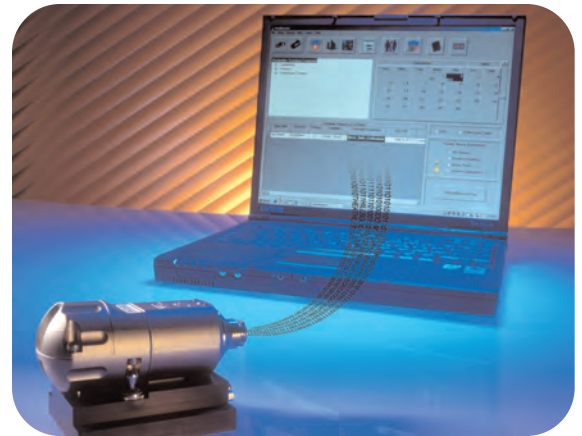

The software is built around a structure of Routes, Locations, and Assets. Administrators can schedule routes on a daily, weekly, or monthly basis and assign them to a specific collector key. The only action required of a collector to program their own key is to place the key briefly on a Docking Station.

Locations and Assets can be moved between Routes via the Schedule Wizard. This allows for prompt response to unanticipated changes in schedule or personnel. The included Site Manager software can automatically dial up any number of remote locations to download and upload route information. (Remote Key Programmer is required for remote site operations).

Users can retrieve sorted audit data from the VendSecure database by means of a Report Wizard. Customized reports give you the ability to manage by exception or obtain a complete overview of your operation.

## Benefits:

- ◆ Protect your revenues by controlling access to your locks
- ◆ Improve collection efficiency by tracking all openings of the lock
- ◆ Know if scheduled collections are being skipped
- ◆ Automatically program keys at remote sites
- ◆ Immediately respond to lost or stolen keys
- ◆ Program keys locally or over a network
- ◆ Print customized reports

# Ordering Information

---

## Software

- EV-4504      **Software Host Kit**  
Includes Software, one Docking Station with cable, Admin Key, and Manual
- EV-4505      **Demonstration Software**

## Accessories

- EV-500004      **Docking Station with Cable**  
(RJ-45 to DB-9 cable included)
- 94-0172      **Replacement Programmer Pins**  
(Package of eight pins)
- EA-250046      **USB Backup Drive**  
160 GB Drive for backing up standalone software installations
- EA-250047      **Bar Code Scanner**  
Hand-held scanner for entering lock codes into installation reports

## Technical Requirements:

- ◆ Windows 2000 Professional or higher (Standalone installations)
- ◆ MSDE is provided for Standalone Installations
- ◆ Windows Server 2003 Web Edition (Network Installations)
- ◆ 1.5 GHZ Processor
- ◆ 512 MB RAM (Minimum)
- ◆ CD Drive
- ◆ 1 free serial port for each Docking Station
- ◆ 20 GB (or greater) disk drive
