

Parking ROI Factors

Key Management Costs

Building and distributing cables of keys every day is a costly, time-consuming process. Key rooms require constant maintenance tracking, and control.

With NEXGEN, a single key can service an entire route. Since the key can be reprogrammed and assigned to a different route every day, you no longer have to manage hundreds of keys.

Untraceable Theft

Many Parking Managers suspect that they are losing money, but have no way to quantify their losses. Stealing from a meter can be as easy as leaving a paper cup in place of the coin canister.

NEXGEN allows you to determine who can open a meter and when. Time stamped records of all openings or attempted openings are stored in both the lock and the key. Because you can account for every collection, you'll be able to protect your honest collectors while tracing loss to the source.

Key Duplication

If everyone has keys to meters, then disgruntled employees, gangs, and amateur thieves can get duplicates made. Worse yet, theft can go undetected for months or years.

Because the NEXGEN key is virtually impossible to duplicate, you are protected against unauthorized copies. In addition, the NEXGEN key can be programmed to expire at the end of each day, so a stolen key is useless to a would-be thief.

Lost Productivity

How many collectors do you need to get the job done? Are meters being skipped? In order to run an efficient department, this is the type of information you need.

NEXGEN Security Manager software allows you to track when collections begin and end, as well identify gaps in collection activity. You will have the data you need to increase accountability and productivity.
