

Controlled Access. Audit Capability. Physical Security. System Management.

NEXGEN[®] Security Manager *Parking Edition*

Medeco developed this application with input from parking professionals to complement daily route operations.

Managers can schedule routes on a daily, weekly, or monthly basis and assign them to a specific collector key. Meters can be easily moved between Routes via the Schedule Wizard. This allows for prompt response to unanticipated changes in schedule or personnel. With the included Communication Manager software, you can schedule key programming to take place overnight or whenever network traffic is lowest, so that keys are always ready to issue when collectors arrive.

Users can retrieve sorted audit data from the NSM database by means of a Report Wizard. These customized reports give you the ability to manage by exception or obtain a complete overview of your operation.

Benefits:

- ◆ Control who can access your meters and when they can be opened
- ◆ Track all openings and attempted openings
- ◆ Know if collections or scheduled service times are being skipped
- ◆ Determine if time is being used efficiently on collection or service routes
- ◆ Respond immediately to lost or stolen keys
- ◆ Simplify key room operations
- ◆ Print customized reports that allow you to manage by exception or obtain a complete overview of your operation

Applications:

Parking meters that require access control and audit capabilities.

Ordering Information

Software

- EV-4509 **Software Host Kit**
Includes Software, one Docking Station with cable, Admin Key, and Manual
- EV-4512 **Demonstration Software**

Accessories

- EV-500004 **Docking Station with Cable**
(RJ-45 to DB-9 cable included)
- 94-0172 **Replacement Programmer Pins**
(Package of eight pins)
- EA-250046 **USB Backup Drive**
160 GB Drive for backing up standalone software installations
- EA-250047 **Bar Code Scanner**
Hand-held scanner for entering lock codes into installation reports

Technical Requirements:

- ◆ Windows 2000 Professional or higher (Standalone installations)
- ◆ MSDE is provided for Standalone Installations
- ◆ Windows Server 2003 Web Edition (Network Installations)
- ◆ 1.5 GHZ Processor
- ◆ 512 MB RAM (Minimum)
- ◆ CD Drive
- ◆ 1 free serial port for each Docking Station
- ◆ 20 GB (or greater) disk drive
