Security Solutions for Multiple Concerns

Medeco offers an array of solutions for a variety of security needs.

Picture a building with Medeco³ high security cylinders on the exterior doors for protection against all forms of attack, including use of unauthorized keys. Then imagine BiLevel cylinders on washrooms and other areas with lower security requirements. electromechanical cylinders (coming soon!) are installed on the computer room, providing electronic access control and audit trail. Utility patented Hybrid keys with electronic heads also work the mechanical locks in the building. All keys are tracked and managed with an easy to use key management system.

Managing multiple sites is often made simple with KeyMark's small format interchangeable core – allowing any authorized person to easily replace the core for instant 'rekey' protection. Hybrid electromechanical cylinders (coming soon!) are added to the system that utilize the same keys and provide audit ability with convenient wireless installation. Key management tools do the heavy lifting to tell you who have access to which area. Life is good, change is quick.

Logic - Just What the Doctor Ordered

Two Chicago-area hospitals searching for a way to selectively secure doors, sophisticated readouts on door users, and easily change door security at locations – without spending a lot of money on installation – found what they were looking for in Medeco Logic.

"The hospitals were looking for all of the features that are this product in order to secure

several fairly sensitive areas throughout their facilities,” Bob Ilhorn, owner of Illinois-based Correct Electronics explains.

At Edward Hospital, those areas included a cashier room in the Food Services and an area where supplies are stored in Lost and Found.

“We were looking for something that could provide an audit trail and a bit higher level of lock security than what we had before,” explains Lee Matthews, Public Safety Manager at Edward Hospital. “In the past, we’ve had difficulty when someone wants key card or control above a mechanical security system because it becomes cost prohibitive to install with the piping and wiring that are required.”

Facing a similar need to protect sensitive areas, Lake Forest Hospital now uses Logic on Hospital’s pharmacy. Personnel there were reportedly attracted to the product because of the access control it offers and the fact that it installs without wiring.

At Edward Hospital, the staff has evaluated Logic for the last six months, and according to Matthews, it’s been a success. “They like it. It’s easy enough to use. And in those where we’re limited in bringing the infrastructure down, it’s a quick fix.

“The other thing I like is if a department calls me tomorrow and says, ‘I have a door that I don’t know who’s going into,’ we can pull out the mortise cylinder and put this in,” adds in a testimony to the easy retrofit installation of a Logic cylinder.

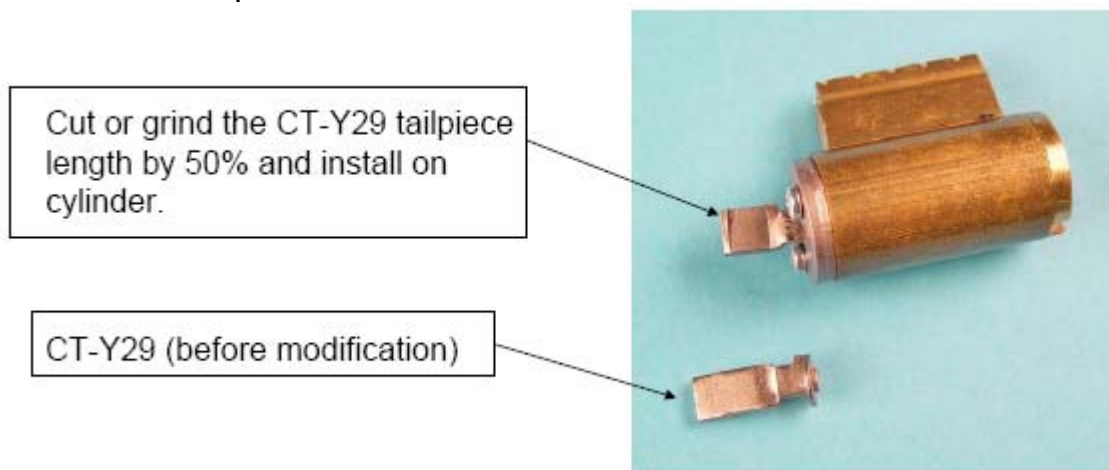

A critical need for an audit trail and a higher level of lock control coupled with a knowledgeable security expert – the perfect prescription for filling customers’ security with Medeco Logic.

Tech Notes

Medeco retrofit for Schlage Electronic Keypad locks

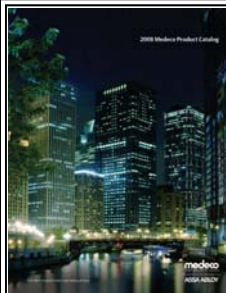

Tech Services have been receiving a few calls from dealers looking for a retrofit cylinder the new Schlage electronic keypad locks (FE 595 and FE 575). We have determined that 20-0801 or 20-0802 cylinder will retrofit the FE Series locksets, but a separate tailpiece modification is required.

The retrofit begins with the 20-0801 or 20-0802 cylinder. Discard the original tailpiece and replace with a modified CT-Y29 (tailpiece must be purchased separately.)

Medeco Spotlight

We are pleased to announce Medeco Canada will not be issuing a price increase for 2008 in the foreseeable future based on the performance of Canadian dollar against the US currency.

The 2007 Canadian Product Catalogue will be revised and reprinted to for the inclusion of several new product lines, and it is expected to ship to the dealer base during April 2008, reflecting 2007 list prices.
