

A LOCKING SYSTEM IS ONLY AS GOOD AS ITS KEY CONTROL.

The next time you need a key duplicated, consider the risk of a security system that has no key control protection. If your keys are easy to copy, chances are the lock itself may be inadequate.

An effective key control plan is essential to a Medeco system. Our key control programs allow you to choose the level of key duplication protection and convenience that's right for you. If you're investing in a security system for your home, business or institution, Medeco allows you to control who has your keys.

WHAT IS HIGH SECURITY?

Confidence that you're protected so you don't have to worry about who can get into your doors. Elevating and rotating pins and a third locking element in Medeco³ provide the highest security protection against a covert attack.

The UL 437 listing on Medeco³ cylinders means that it has been tested and proven to withstand many forms of physical attack, including picking, drilling and bumping.

Controlled Duplication: The Key Issue in High Security

SECURITY BEGINS WITH KEY CONTROL

Medeco believes in giving customers the greatest control over their security. That's why Medeco key control programs are protected by patent, trademark and copyright laws. That means your keys may only be duplicated by Medeco or an authorized Medeco dealer, and only at your request.

Many common keys carry warnings such as "Do Not Duplicate" or "Restricted," but these words have no impact without utility patents to back them up. Medeco has successfully litigated its right to protect against unauthorized manufacture and distribution of its patented, restricted keys.

LEVEL 1 — PATENTED KEY CONTROL

Medeco BiLevel cylinders offer affordable key control through patent-protected keys. They should be used in areas where protection from unauthorized duplication of keys is the only concern.

LEVEL 2 — MECHANICAL HIGH SECURITY

Medeco³ cylinders offer the same key control solutions as Medeco BiLevel, but with added protection against drilling, picking and other forms of physical attack. They should be used in areas where unauthorized duplication of keys and protection from physical attack on the cylinder are a concern.

A KEY CONTROL PROGRAM THAT IS RIGHT FOR YOU

CARD PROGRAM

You'll be issued a card with unique embossed control data and a space for your signature to authorize keys on this program.

To obtain duplicate keys, present the card to a participating Medeco locksmith. The data and signature will be verified and a key issued, usually within 24 hours.

The Card Program is ideal for consumers, businesses and institutions that plan to issue control cards to more than one person or need keys available nationwide.

Unique Card(s) Issued—Cards are issued to those authorized to request duplicate keys.

Nationwide Availability—Keys can be duplicated at authorized participating locksmiths when the proper card and signature are presented.

SIGNATURE PROGRAM

This program offers instant access to additional keys. Consumers, businesses and institutions simply return to the locksmith where they purchased the lock. Keys are duplicated immediately after the authorized signature has been verified.

Immediate Key Duplication—Keys can be duplicated immediately after the signature has been verified.

One-Source Duplication—Keys may only be duplicated by the locksmith where the locks were purchased.

CONTRACT PROGRAM

The Contract Program is for large businesses and institutions that want to produce specific Medeco keys within their facility for their own use. A strict written contract with Medeco is required to prevent unauthorized key duplication or proliferation of key blanks.

Internal Duplication—With a strict contract in place, keys can be duplicated within your facility.

FACTORY PROGRAM

This program is for consumers, businesses and institutions that want the most restricted level of key control. Additional keys are only available from the Medeco factory, and only with the proper authorization.

Factory-Only Duplication—The Medeco factory is the only facility capable of duplicating keys on this program.

ELECTRONIC KEY CONTROL

In addition to a traditional high security mechanical system, Medeco also offers the Medeco³ Logic eCylinder Loss & Liability Solution. eCylinders provide controlled access, accountability, physical security and systems management.

The Medeco³ Logic System can be used in conjunction with Medeco³ or Medeco BiLevel Mechanical Systems, providing a one-key solution.

LEVEL 1 PATENTED KEY CONTROL

LEVEL 2 MECHANICAL HIGH SECURITY

LEVEL 3 LOSS & LIABILITY
