

Medeco® XT Remote Programming Device

The Medeco® XT Remote Programming Device offers management of key systems utilizing XT 2.0 Web Manager Software. This versatile electronic locking system allows administrators the ability to manage Medeco XT keys and cylinders from anywhere in the world.

The optional device enhances the flexibility of the system by enabling administrators of web hosted systems to facilitate key programming, recurring validations and audit data collection directly by the key holder. The Medeco XT Remote Programming Device requires no additional PC or Hub to communicate with the Web Manager Server.

The device keypad is used to input an optional four digit personal identification number for secondary user authentication in high security environments. The LCD screen indicates the key programming status and can display short messages sent by the administrator to the key holder.

Medeco® XT Remote Programming Device Features:

- Programs Medeco XT keys
- Key interface
- Ethernet port
- Keypad for secondary user authentication
- LCD screen for programming status and messages
- Metal Construction
- Black finish
- AC adapter provided
- Dimensions: 10.5" long x 5.0" high x 2.5" deep
